

Priti Patel - Secretary of State for the Home Department
c/o 10 Downing Street
Westminster
London
SW1A 2AA

28th January 2021

Hello Priti,

I write to you as a concerned overseas citizen, one who is aware of global developments relating to the SARS-CoV-2 virus pandemic. I see that the UK is suffering one of the worst outcomes in terms of COVID-19 disease and economic consequences. I enclose with this letter a proven treatment that will rescue people from a COVID infection. It is so cheap that only the poorest countries can afford it, however it's now within easy reach of the United Kingdom.

This pill kit will save you or one of your family members from an infection of COVID-19. It also works for the newer "more dangerous" strain(s) of the virus. I send it to you to show that **it is real and readily available in January 2021**. It is also usefully complimentary to "safe and effective" vaccination programmes, providing immediate relief to those who are unlucky enough to be already infected.

I expect you to take a few days to conduct due diligence. I recommend this independent website where you can learn more about similar versions of this treatment and their global adoption. www.cureforCOVID.world

In your role as Secretary of State for the Home Department you carry a great responsibility to weigh alternate solutions to the pandemic and adopt those that are safe, affordable and fast.

These proven treatments not only provide immediate benefits for COVID sick people but also provide prophylactic protection. A key component is the safe drug **Ivermectin**, already dispensed 3.7 million times to the human population (with little or no side-effects).

You could consider prophylaxis in within your various remits to protect civil servants and or public sector workers. It could be considered a legal duty to deploy a known protection to those who are exposed to infection risk during their normal duties.

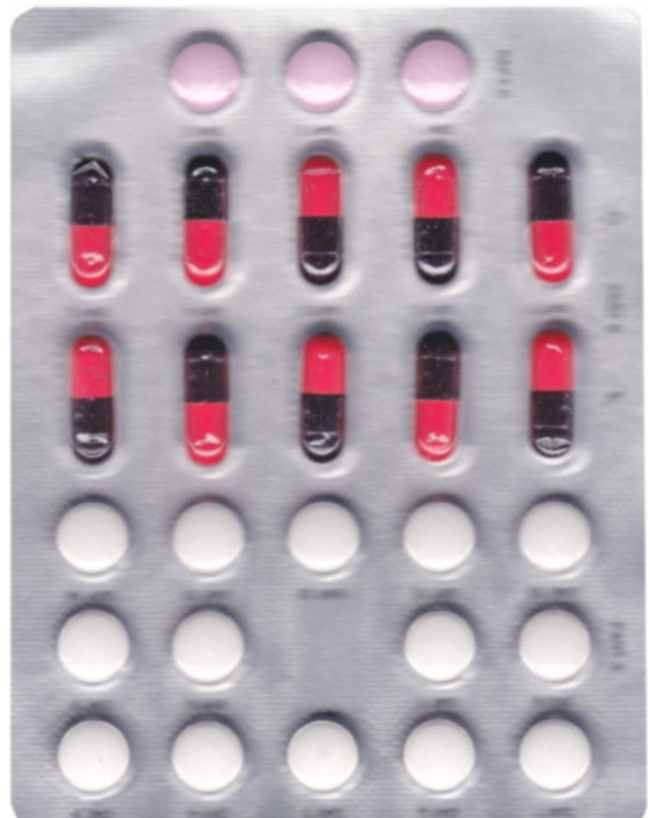

I hope that you welcome this gift of a cure and associated information to improve your chances. Please do follow the lead taken in other nations. Adopt this remedy in the UK during February 2021. Bring your pandemic to a quick and direct conclusion.

Show you know, Show you care.

Kindest regards,

Doctor Paolo

Cure for COVID-19

Yes that's right, there is a treatment for COVID

IMPORTANT: Do not take prescription drugs without advice from a medical professional. Many countries do not know about the cure for COVID. Show your doctor this information flyer, let them decide. Don't try to buy these treatments, instead: **Show YOU Know** and **Show YOU Care** - Petition your local health authority to consider this solution.

Global Resources and Commendations

Dr Pierre Kory
Leader of the FLCCC, an alliance of experts in viral treatments have developed the "Math+ Protocol" and "I-Mask+ Protocol" treatments for COVID-19.
www.covid19criticalcare.com

In Uttar Pradesh (India) they pioneered a kit protocol with hydroxychloroquine (HCL). Indian Express news reported in August 2020 the Chief Secretary substituted Ivermectin because it was far more effective for infected people. These affordable kits are now widely adopted for India, a low-income country of 1.3bn people.

Professor Thomas Borody
Pioneered a ground-breaking triple therapy cure for peptic ulcers in 1987. During 2020 he designed and promoted Ivermectin in a triple therapy against COVID-19 and has said "international data reports an almost 100% cure rate and a symptom improvement within 4-6 days". Bloomberg report: Ivermectin Triple Therapy Protocol for COVID-19.
<https://www.skynews.com.au/details/6188680157001>

Professor Satoshi Omura
Discovered Ivermectin in 1975 and won the 2015 Nobel prize. This wonder drug has already been dispensed 3 trillion times. Normally prescribed to rid parasites it shows amazing results with the COVID-19 disease. It has been proven safe in both humans and animals.
<https://www.nobelprize.org/prizes/medicine/2015/omura/facts/>

Dr Hector E. Carvallo
Led an observational study where the untreated control group suffered 58% illness by comparison to those treated by an Ivermectin protocol, whom suffered ZERO (nil) illness <https://www.cadenanueva.com/wp-content/uploads/2020/08/Protocolo-IVERMECTIN-Sinopsis-Resultados.pdf>

Dr Chris Martenson
Chris promotes "resilience" via investigative research and journalism, he identified the danger from the virus in January 2019 www.peakprosperity.com

Papua New Guinea Health Ministry
All 9M citizens receive annual Ivermectin treatments to protect them from mosquito parasites. WHO confirms P.N.G has only suffered 9 COVID deaths (total).

Belize - December 2020

Dr Melissa Diaz-Musa of Belize's Ministry of Health approves Ivermectin as a Covid-19 treatment.

Peru - December 2020

Pilar Mazzetti Soler, the Peru Minister of Health confirms that Ivermectin is in the "Minsa" medical guide for the care of COVID-19 under Doctor supervision.

Macedonian Health Ministry Jan 21

MALMED Drug Agency issues guidelines to Family Doctors on the use of Ivermectin to treat COVID-19.

Overview

The pandemic spread of the corona virus SARS-CoV-2 that began in the Autumn 2019 is still causing worldwide havoc in December 2020. The disease that comes from an infection with the virus is known as COVID-19 and can be a killer. The elderly, weak and the unlucky can suffer severe symptoms, organ damage and death. We now have an effective treatment for the disease, largely due to the creativity - dedication, and perseverance of a few global scientists. No one should now die of COVID-19.

Vaccinations and the Cure for COVID-19 are complementary

The cure for COVID-19 is not a vaccine, it is a treatment that stops the infection and allows recovery. It does not provide resistance to future viral infections, for example a person who is rescued by the treatment in 2021 may need to be dosed again for the same virus in 2022. We still need proven, safe and effective vaccines. Traditional live-attenuated vaccines "wake-up" the body's immune system so it recognises the shape of that virus, it then mounts an effective defence when it sees it. Vaccines protect the whole population via "herd immunity", when enough individuals are vaccinated then the virus can no longer spread through the population and cause widespread damage.

How does the treatment work?

The treatment is a *broad-spectrum host-directed anti-viral protocol*. It is a drug combination that is taken by the patient over a series of days. The different components of the drug act together multiplying the benefit of each other (synergistic). These drugs stop the virus penetrating human cells and also stop the virus multiplication process, they are a viruscide. Leaders in medicine have developed similar treatment regimes that are administered in hospital settings. Pill kits such as those shown above are marginally less effective than hospital-supervised delivery but they do make the treatment much more widely available. Note: it remains unclear whether Ivermectin is safe during pregnancy and is not recommended for children under 5 years of age or for those taking blood thinners (Warfarin).

What is in it and how much does it cost?

Ivermectin, Doxycycline and Zinc - Two dollars (USD \$2.00) (Vitamins D₃ and C are also recommended)

Show YOU Know Show YOU Care...

Use on Your Mask

- 1- Print on A4 paper
- 2- Cut - Pierce - Thread
- 3- Show on side of mask
If people ask, give flyer

Tip: Sellotape the logo before cutting, also tie with ear loop from used mask.

Use in Your Pocket

- 1- Print on A4 paper
- 2- Fold x2 length-ways
Fold x1 width-ways
- 3- Place in pocket (logo out)
If people ask, give flyer

Use on Your Bag

- 1- Print on A4 paper
- 2- Fold x 3 length-ways
- 3- Tie in simple bow
If people ask, give flyer

This flyer is copyright-free print it locally and distribute.
