

Rishi Sunak - Chancellor of the Exchequer
9 Downing Street
Westminster
London
SW1A 2AA

30th November 2021

Dear Rishi,

I write to you again, following up on a letter I sent you on the 28th January this year, some 10 months ago (see attached copy). I continue to be concerned about what has happened in the UK relating to the SARS-CoV2 virus pandemic. I note that despite supplying you with a “cure for covid” pack that your Government pursued an almost exclusive policy of pharmaceutical injection. These leaky vaccines (experimental mRNA medical devices) seem to have significantly worsened the plight of your citizens, by comparison to countries that have deployed Ivermectin, e.g. India & Japan.

The Yellow Card reporting system records nearly 1.3M adverse reactions and 1800 deaths from these injections. It is well known that such recording systems only capture between 1% and 10% of actual adverse outcomes.

UK Yellow Card Data to 17th Nov. 2021		
Brand	Adverse Reactions	Deaths
Pfizer	380236	611
AstraZeneca	842270	1127
Moderna	58476	19
Unknown	3768	32
TOTAL	1,284,750	1789

Hopefully you will agree that millions of injuries and thousands of deaths are not just unfortunate but were quite unexpected from these “safe and effective” vaccines? I note that the products remain on temporary or emergency authorisation (according to the MHRA) but also that the data-basis for the temporary status is still derived from the original period in autumn 2020 (before this Phase3 trial was commenced on the UK population). I suggest that it is now time to review the authorisation status based on empirical data, specifically the 1.3M adverse reactions and 1800 deaths.

I have noticed a reluctance to promote Ivermectin (IVM) in early treatment or in hospital settings of more serious infections. In the USA, where they still discourage home use you will find that IVM is actually being used in hospitals to reduce the bad outcomes from “breakthrough infections” (where the vaccinated patients exhibit symptoms of COVID but caused by the vaccination itself). To this end I enclose another gift, this time, pure Ivermectin to show how easily available it is and how affordable, this 4 pill blister pack costs only £1.23. You could use this for yourself and your own family if they contract COVID despite their vaccination and you could promote it for use in all UK healthcare settings.

In your role as Chancellor of the Exchequer you carry a great responsibility to weigh alternate solutions to the pandemic challenge and adopt those that are safe, affordable and fast. This is a safe drug, Ivermectin has already been dispensed 3.7million times to the human population (with little or no side-effects). You could consider prophylaxis in within your various remits to protect civil servants and or public sector workers. It could be considered a legal duty to deploy a known protection to those who are exposed to infection risk during their normal duties.

Additionally I would like to draw to your attention a number of studies made of samples of the actual contents of real vaccine vials. These independent examinations deserve an official Government investigation and clarification. It seems that in addition to the expected mRNA active ingredients, that number of additional excipients (unexpected ingredients) have been discovered, possibly due to poor quality control but also perhaps due to nefarious activities or other agendas.

- Graphene materials
- Trace Metals & metal shard contamination
- Electro-magnetic and conductive components
- Live Parasites

Lastly it is important to consider the effects of your vaccination programme on “all cause” mortality and the prospective health of the UK population. We note that the excess deaths (compared to the 5 year average) are elevated since July 2021 and show no sign of returning to the normal level (see graph)

The start to the elevated deaths in the summer months along with lack of any traditional infection bell curve is suspicious. The symptoms of people presenting in primary care and hospitalisation deserve close attention. It seems that people are suffering new symptoms, inconsistent with those of the COVID-19 respiratory illness from the year 2020.

- Cardiovascular Deterioration
- Breakthrough infection or Antibody-dependent Enhancement (ADE)
- Vaccine Acquired Immunodeficiency Syndrome (VAIDs)
- Reproductive Health issues (fertility and birth disarray)
- Super Cancers (out of remission and fast metastasising)
- Prion Disease (CJD)

We propose the cause of the elevated mortality (24K) to be a “delayed” vaccine-related outcome, and strongly suggest you immediately stop all COVID injections in the UK.

Kindest regards,

Doctor Paolo

28th January 2021

Hello Rishi,

I write to you as a concerned overseas citizen, one who is aware of global developments relating to the SARsCOV2 virus pandemic. I see that the UK is suffering one of the worst outcomes in terms of COVID-19 disease and economic consequences. I enclose with this letter a proven treatment that will rescue people from a COVID infection. It is so cheap that only the poorest countries can afford it, however it's now within easy the reach of the United Kingdom.

This pill kit will save you or one of your family members from an infection of COVID-19. It also works for the newer "more dangerous" strain(s) of the virus. I send it to you to show that **it is real and readily available in January 2021**. It is also usefully complimentary to "safe and effective" vaccination programmes, providing immediate relief to those who are unlucky enough to be already infected.

I expect you to take a few days to conduct due diligence. I recommend this independent website where you can learn more about similar versions of this treatment and their global adoption. www.cureforcovid.world

In your role as Chancellor of the Exchequer you carry a great responsibility to weigh alternate solutions to the pandemic challenge and adopt those that are safe, affordable and fast.

These proven treatments not only provide immediate benefits for COVID sick people but also provide prophylactic protection. A key component is the safe drug **Ivermectin**, already dispensed 3.7million times to the human population (with little or no side-effects).

These proven treatments not only provide immediate benefits for COVID sick people but also provide prophylactic protection. A key component is the safe drug **Ivermectin**, already dispensed 3.7million times to the human population (with little or no side-effects).

You could consider prophylaxis in within your various remits to protect civil servants and or public sector workers. It could be considered a legal duty to deploy a known protection to those who are exposed to infection risk during their normal duties.

I hope that you welcome this gift of a cure and associated information to improve your chances. Please do follow the lead taken in other nations. Adopt this remedy in the UK during February 2021. Bring your pandemic to a quick and direct conclusion.

Show you know, Show you care.

Kindest regards,

Doctor Paolo

Cure for COVID-19

Yes that's right, there is a treatment for COVID

IMPORTANT: Do not take prescription drugs without advice from a medical professional. Many countries do not know about the cure for COVID. Show your doctor this information flyer, let them decide. Don't try to buy these treatments, instead: **Show YOU Know** and **Show YOU Care** - Petition your local health authority to consider this solution.

Global Resources and Commendations

Dr Pierre Kory

Leader of the FLCCC, an alliance of experts in viral treatments have developed the "Math+ Protocol" and "Mask+ Protocol" treatments for COVID-19.
www.covid19criticalcare.com

In Uttar Pradesh (India) they pioneered a kit protocol with hydroxychloroquine (HCL). Indian Express news reported in August 2020 the Chief Secretary substituted Ivermectin because it was far more effective for infected people. These affordable kits are now widely adopted for India, a low-income country of 1.3bn people.

Professor Thomas Borody

Pioneered a ground-breaking triple therapy cure for peptic ulcers in 1987. During 2020 he designed and promoted Ivermectin in a triple therapy against COVID-19 and has said "international data reports an almost 100% cure rate and a symptom improvement within 4-6 days". Bloomberg report: Ivermectin Triple Therapy Protocol for COVID-19.
https://www.skvnews.com.au/getatts/?_id=188680157001

Professor Satoshi Omura

Discovered Ivermectin in 1975 and won the 2015 Nobel prize. This wonder drug has already been dispensed 3 trillion times. Normally prescribed to rid parasites it shows amazing results with the COVID-19 disease. It has been proven safe in both humans and animals.
<https://www.nobelprize.org/prizes/medicine/2015/omura/facts/>

Dr Hector E. Carvallo

Led an observational study where the untreated control group suffered 58% illness by comparison to those treated by an Ivermectin protocol, whom suffered ZERO (nil) illness <https://www.cadenanueva.com/wp-content/uploads/2020/08/Protocolo-IVERCAR-Sinopsis-Resultados.pdf>

Dr Chris Martenson

Chris promotes "resilience" via investigative research and journalism, he identified the danger from the virus in January 2019 www.peakprosperity.com

Papua New Guinea Health Ministry

All 9M citizens receive annual Ivermectin treatments to protect them from mosquito parasites. WHO confirms P.N.G has only suffered 9 COVID deaths (total).

Belize - December 2020

Dr Melissa Diaz-Musa of Belize's Ministry of Health approves Ivermectin as a Covid-19 treatment.

Peru - December 2020

Pilar Mazzetti Soler, the Peru Minister of Health confirms that Ivermectin is in the "Minsa" medical guide for the care of COVID-19 under Doctor supervision.

Macedonian Health Ministry Jan 21

MALMED Drug Agency issues guidelines to Family Doctors on the use of Ivermectin to treat COVID-19.

Dr Andrews Hill's Ivermectin meta-analysis
University of Liverpool

Overview

The pandemic spread of the corona virus SARS-CoV-2 that began in the Autumn 2019 is still causing worldwide havoc in December 2020. The disease that comes from an infection with the virus is known as COVID-19 and can be a killer. The elderly, weak and the unlucky can suffer severe symptoms, organ damage and death. We now have an effective treatment for the disease, largely due to the creativity - dedication, and perseverance of a few global scientists. No one should now die of COVID-19.

Vaccinations and the Cure for COVID-19 are complementary

The cure for COVID-19 is not a vaccine, it is a treatment that stops the infection and allows recovery. It does not provide resistance to future viral infections, for example a person who is rescued by the treatment in 2021 may need to be dosed again for the same virus in 2022. We still need proven, safe and effective vaccines. Traditional live-attenuated vaccines "wake-up" the body's immune system so it recognises the shape of that virus, it then mounts an effective defence when it sees it. Vaccines protect the whole population via "herd immunity", when enough individuals are vaccinated then the virus can no longer spread through the population and cause widespread damage.

How does the treatment work?

The treatment is a *broad-spectrum host-directed anti-viral protocol*. It is a drug combination that is taken by the patient over a series of days. The different components of the drug act together multiplying the benefit of each other (synergistic). These drugs stop the virus penetrating human cells and also stop the virus multiplication process, they are a viruscide. Leaders in medicine have developed similar treatment regimes that are administered in hospital settings. Pill kits such as those shown above are marginally less effective than hospital-supervised delivery but they do make the treatment much more widely available. Note: it remains unclear whether Ivermectin is safe during pregnancy and is not recommended for children under 5 years of age or for those taking blood thinners (Warfarin).

What is in it and how much does it cost?

Ivermectin, Doxycycline and Zinc - Two dollars (USD \$2.00)
(Vitamins D₃ and C are also recommended)

Show YOU Know Show YOU Care...

Use on Your Mask

- 1- Print on A4 paper
- 2 - Cut - Pierce - Thread
- 3 - Show on side of mask
If people ask, give flyer

Tip: Sellotape the logo before cutting, also tie with ear loop from used mask.

Use in Your Pocket

- 1- Print on A4 paper
- 2 - Fold x2 length-ways
Fold x1 width-ways
- 3 - Place in pocket (logo out)
If people ask, give flyer

Use on Your Bag

- 1- Print on A4 paper
- 2 - Fold x3 length-ways
- 3 - Tie in simple bow
If people ask, give flyer

This flyer is copyright-free print it locally and distribute.

This website content is copyright-free, link to it, or even host this image on your website.

IMPORTANT: Do not take prescription drugs without advice from a medical professional. Many countries do not know about the treatment for COVID. Show your physician this information flyer, let them decide. Don't try to buy these treatments, instead: **Show YOU Know** and **Show YOU Care** - Petition your local health authority to consider this solution. version 210118
